LDAP

ldap-authentication-provider

- Similar to jdbc-user-service

- Contains attributes for most common configurations:

  - group-search-filter

  - group-search-base

  - user-search-base

  - user-search-filter

- Can be combined with a user-details-service element

ldap-server

- Helper element to connect to ldap server

- Can be used to create a test server

  - Loads an ldif file

  - Default port 389 can be overridden

Maven

- Need three additional jars

    - groupId = org.slf4j

    - artifactId = slf4j-simple

    - version = 1.5.6

    - groupId = org.apache.directory.server

    - artifactId = apacheds-all

    - version = 1.5.5

    - groupId = org.springframework.security

    - artifactId = spring-security-ldap

    - version = 3.2.0.RELEASE

Summary

- Ldap Server Configuration

- Test Server

- Changed Authentication Provider
